

1. Which are the top three variables in your model which contribute most towards the probability of a lead getting converted?

Ans. These are the top variables that contribute towards the result.

1. Total Time Spent on Website
2. Lead Origin is lead add form
3. Lead Source is welingak website

2. What are the top 3 categorical/dummy variables in the model which should be focused the most on in order to increase the probability of lead conversion?

Ans. Top 3 Categorical/Dummy variables to increase probability are:

1. Lead Origin is lead add form
2. Lead Source is welingak website
3. Current occupation is Professional

3. X Education has a period of 2 months every year during which they hire some interns. The sales team, in particular, has around 10 interns allotted to them. So during this phase, they wish to make the lead conversion more aggressive. So they want almost all of the potential leads (i.e. the customers who have been predicted as 1 by the model) to be converted and hence, want to make phone calls to as much of such people as possible. Suggest a good strategy they should employ at this stage.

Ans: Leads with following attributes can be considered potential leads and can be called aggressively-

- 1) Leads which spent most time on website
- 2) Their lead origin is lead add form
- 3) They are working professionals.

4. Similarly, at times, the company reaches its target for a quarter before the deadline. During this time, the company wants the sales team to focus on some new work as well. So during this time, the company's aim is to not make phone calls unless it's extremely necessary, i.e. they want to minimize the rate of useless phone calls. Suggest a strategy they should employ at this stage.

Ans - In this condition they need to focus more on other methods like automated emails and SMS. This way calling won't be required unless it is an emergency. The above strategy can be used but with the customers that have a very high chance of buying the course.
